Board of Directors Pueblo West Metropolitan District Pueblo West, Colorado

In planning and performing our audit of the financial statements of the governmental activities, the business-type activities, each major fund, and the aggregate remaining fund information of Pueblo West Metropolitan District (the District) as of and for the year ended December 31, 2021, in accordance with auditing standards generally accepted in the United States of America, we considered the District's internal control over financial reporting (internal control) as a basis for designing audit procedures that are appropriate in the circumstances for the purpose of expressing our opinions on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the District's internal control. Accordingly, we do not express an opinion on the effectiveness of the District's internal control.

Our consideration of internal control was for the limited purpose described in the preceding paragraph and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies and, therefore, material weaknesses or significant deficiencies may exist that were not identified. However, as discussed below we identified certain deficiencies in internal control that we consider to be material weakness.

A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, misstatements on a timely basis. A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected, on a timely basis. We considered the following deficiencies in internal control to be material weaknesses.

A significant amount of material adjustments were necessary to correct year-end financial statement balances to be in accordance with generally accepted accounting principles.

These adjustments (complete schedule attached) included a range of accounting areas and funds as follows:

- o Mis-classification of expenditures
- Utility accounts receivable and revenue
- o Proprietary fixed assets
- o Proprietary retainage payable and net position
- o Deferred inflows of resources and fund balance
- o Recording of market value changes in investments
- o Debt service fees and related accruals
- Land inventory and sales
- o Prepaid expenses and water assessment expenses
- o Inventory in the general fund related to fleet, roads and facilities
- o Federal grant revenue and fund balance

These adjustments were the result of insufficient internal controls over financial reporting. Staff turnover appeared to have a significant impact along with a lack of written policies and procedures covering year-end financial statement adjustments. In several cases, prior year-end adjustments were not properly reversed.

We recommend that staff obtain relevant training to gain a better understanding of the financial reporting model and goals. Year-end procedures should be written to ensure consistency in reporting and reduce turnover risk.

Inventory, used within the internal services function, was not properly monitored or reported.

As noted above, adjustments were necessary to record year-end inventory used in fleet, roads and facilities. These inventories had not been recorded as required under generally accepted accounting policies. There were no appropriate tracking or physical inventory counting procedures in place that would provide accurate end of period inventory values necessary to properly record financial statement amounts. Counts were only performed during the audit and adjustments were necessary to estimate amounts as of year-end.

There were no accurate counts performed on these inventories as of December 31, 2020, however, management elected to adjust the beginning balance to agree with adjusted year-end balances and post a prior period adjustment. It appears that this would more accurately record the additional inventory rather than recording the full change against current year expenses. Management has made the assumption that the overall value would have not been substantially different from the year-end inventory value.

We recommend that procedures be put in place to contemporaneously monitor inventory levels and to require periodic physical counts to verify the accuracy of the inventory monitoring system. These physical counts should, at a minimum, occur at or near year-end.

This communication is intended solely for the information and use of management, the board of directors, and others within the District, and is not intended to be, and should not be, used by anyone other than these specified parties.

Mi Pherson, Goodint, Proluce & Mikeland, P.C.
